

FREAKY FACTORY

You are the head scientist at the Automaticar factory which is controlled by a central computer. When the computer malfunctions all the automated tools go on the rampage! You must work your way through hundreds of rooms to get to the shutdown control located at the southwest corner of the complex, collecting at least four keys on your way. On reaching the shutdown room you must unlock four doors in the correct sequence and then move to the right hand side of the Stop Control. The keys are scattered around the factory along with bottles of elixir, which when collected have a random effect to your player. Sometimes tools shoot at you and you can return the attack by using your fire button.

Firebutton: Shoot at tools when they fire at you.

Option: Activates a warp which can put you anywhere in the factory.

Hints: Map out the rooms as you would an adventure game. Your gun is sometimes a bit dodgy and might leave a static energy particle on screen. Don't touch it! In the final room four locks can be seen. Walking over one (in possession of a key) will open a door in one of the corridors. If it is the first lock in the sequence the correct door will have opened. If not, go back out of the room again to re-set the locks without wasting your keys. Picking up the various bottles can have certain effects on you or the tools.

To Load: Hold down Option and Start and switch on. Press play and hit return.
